

Water-to-Water Heat Exchanger System FlowCool Unicus Cooling Capacity 1.3 kW

Water-to-Water Heat Exchanger System FlowCool Unicus

The FlowCool Unicus is a cooling system without active refrigeration. The process heat is transferred via a heat exchanger to the central cooling water supply (=inhouse cooling circuit). The application itself is cooled via its own water circuit (=application cooling circuit). This system offers controllable water quality and runs very quietly. For this reason it is popular in laboratories and other working areas.

The FlowCool Unicus can be usefully employed whenever the required or acceptable temperature for the application lies above the temperature of the central cooling water supply. It is supplied ready for connection and equipped with:

Plastic tank

General alarm

Remote control

- Pump Electronic control with digital display
 - Pump pressure gauge
 - 2-way control valve
 - Housing powder-coated steel plate RAL 9002 (grey white)
- Plate heat exchanger
 - (stainless steel, copper-brazed)
